

The Model 747

The Money Saver

- Optimized for quick disc maintenance & cleaning
- Average disc cleaning time of 20 seconds
- Average disc repair time of 40 seconds
- 12¢ to 24¢ per disc repair cost!
- Repairs all 3" & 5" disc formats including CD, DVD, CD-ROM, X-BOX, PlayStation 1 & 2, Game Cube, computer data discs and more

The Model 747 is a dry process disc repair machine, meaning it does not use a liquid (like water) to cool or lubricate. Instead it uses a specially formulated polishing compound in combination with Low Friction Rotation to quickly remove fingerprints to light abrasions from any disc.

In the Low Friction Rotation process the polishing pad and the disc rotate in opposite directions (counter-clockwise and clockwise), which creates a lower level of friction compared to the Model 1600. This process is very safe, and perfect for dry-type machines to minimize the heat produced during repairs.

Azuradisc[®]
Disc Care & Repair

Model 747 - The Money Saver

Dual-Range / Semi-Automatic

Designed for fast maintenance of all types of disc media, the Model 747 will remove the most common types of scuffs and abrasions and will polish each disc back to looking new again in as little as 40 seconds. It is super quiet and small enough to place on the counter of any video store, music store, or library. If you are looking for a quick, easy, inexpensive machine to maintain your rental discs, this machine is what you have been looking for. It will pay for itself over and over again.

- Best Cost / Finish / Speed / simplicity in the industry
- Optimized for rental disc care and maintenance

Disc Care

Need to remove fingerprints from a disc? Each machine comes with a sample of our popular spray cleaner and wiping cloths for fast, easy clean up of oily or dirty discs.

What the machine uses:

The 747 uses two different polishing heads and polishing compound. The process does not require water.

Patent # 6,431,967

Final polishing Stage 2

Polishing Stage 1

Polishing Compound

Spray Cleaner

Wiping Cloth

Features

- A Automatic Timer:
 - Built into the start button, controls the length of each cycle
- B On/Off Switch:
 - Reliable rocker-type power switch
- C Safety Lid:
 - Lid shut-off switch
- D Low-Friction Rotation*

How the machine works:

The Model 747 uses a dry process with two different levels to remove fingerprints to light scratches in any disc format. The specially formulated polishing compound lubricates the process to keep the disc cool.

*Low Friction Rotation.

The polishing pad and the disc rotate in opposite directions, which creates a lower level of friction compared to the Model 1600. Perfect for abrasion removal and dry-type machines to minimize heat.
