1. Red light won't function:

- Plugged in, turned on?
- Check fuse

- Contact Azuradisc if these don't solve problem.

Power Switch

Fuse located in AC receptacle

2. Green light won't function:

- Plugged in, turned on?
- Check lid sensor with magnet, you can use "easy load handle" and service read switch if needed. Magnet in handle should cause read switch to activate green light

NOTE: can also be used on RED/YELLOW lights.

- Contact Azuradisc if these don't solve problem.

Sensor with magnet

3. Poor pressure at polishing head

- Check for complete "easy load handle" connection with spindle.
- Check handle for compression at insert.

- Check handle to large turntable alignment using 1.80" factory setting.

If the spindles must be adjusted they should be moved NO more than a 1/8 th turn at a time. Before any adjustments loosen side base set screws then turn adjustment screw clockwise to raise and counter-clockwise to lower. After adjustments remove and replace base set screws with "blue loctite."

Connection with spindle.

Check handle

4. Machine leaving "swirl marks" on discs

- Was machine primed before start up?
(Push #1 on PLC keypad.)
- Was the PoliCool bottle shaken well before use?
- Debris or dried polish on polishing head
- If machine has been used moderately check for PoliCool compound in bottom of basin.
- Add a slightly more aggressive pressure setting at polishing head to disc contact area.
- Contact Azuradisc if these don't solve problem.

(1) Prime on button
60 second cycle

shaken well

5. PoliCool appears "watery"

- Was the PoliCool bottle shaken recently?
- Have the credits expired?
- Check basin for excessive build up on bottom

NOTE: we recommend using a sponge to clean basin daily and ringing out into basin drain or PoliCool filter directly.

- Contact Azuradisc if these don't solve problem.

Shake well

Credits expired
